MAGGIO 2017

A call from school.

The young Molisani of the L.Pilla institute are formed: the PEARM is characterized by safety, clean energy sources and employment levels to look at a new energy model and a low carbon emission economy.

## YOUNG MOLISANI 5<sup>a</sup> A ITCAT

The young Molisani of the L.Pilla institute are formed: the PEARM is characterized by safety, clean energy sources and employment levels to look at a new energy model and a low carbon emission economy.

## Intentions

Optimizing the use of energy resources, safeguarding and enhancing the environment, cultural heritage and landscape, the use of the territory both for excellent production and for other alternative uses to energy.

## The strategic lines

- 1- reduce energy consumption;
- 2- develop renewable energy sources;
- 3- increase energy efficiency;
- 4- reduce CO2 emissions

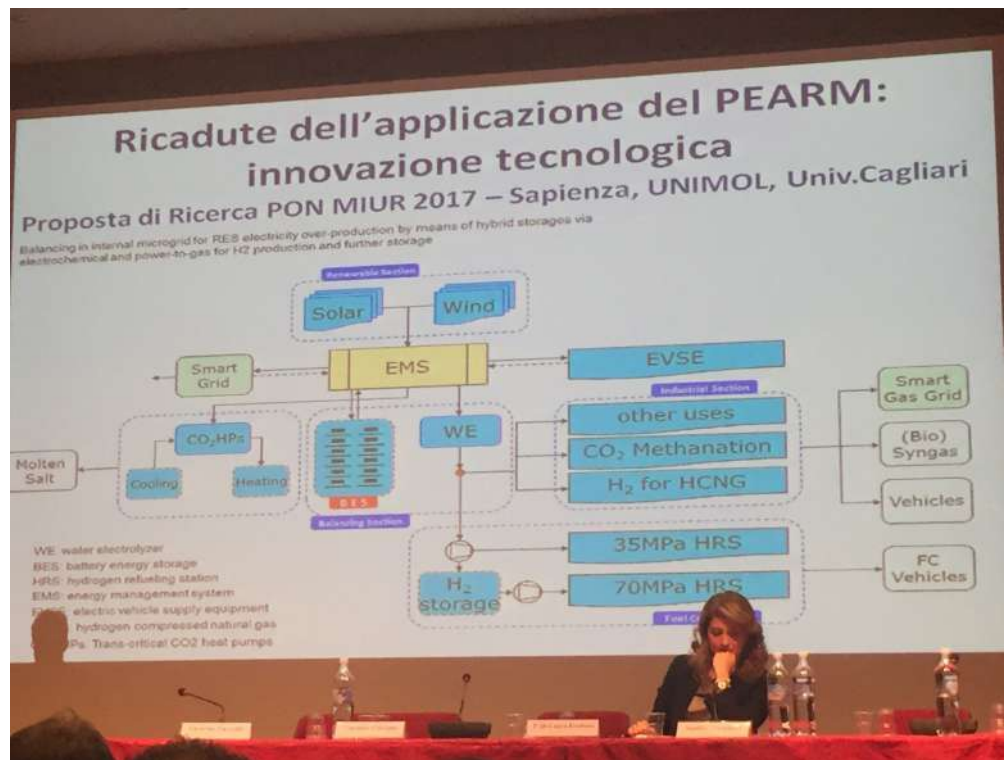

### the strategic lines

- efficiency interventions;
- development of smart energy systems;
- validation of agriculture according to the identified lines in the energy agro plan.
- a new energetic model

## A new energetic model

Centrality of the citizen, seen as a consumer producer informed in a transparent and protected manner in the modalities of the new energy model, based on the generation distributed by energy and on the consistent penetration of all renewable energy sources.

## Innovative features

Important the role of the territory, the protection of the landscape, the respect of territorial constraints, the compatible use of resources, the strongly territorial character of the energy choice that privileges and enhances the local identity and its protection. The strategic infrastructural interventions for regional development are important.

## A call from school.

Through the project activities, attitudes coherent with the international environmental program of eco-schools will be developed starting from schools to local society and even at national and European levels. Since the problem is common, we want to start a transnational movement that extends to our school environment, to families, to other schools and to public institutions, through partnerships up to a national and European dimension.

Natural resources are not unlimited and productive activities without thinking about the environment have a negative impact. For example, the amount of paper consumed per person 0.7 kg / day, means about 140 pages, with an annual consumption of 70 kg. Every year 7 trees are consumed to meet the need for per Capita paper. The project will encourage the use of cards produced with cheaper methods and materials, guaranteeing for example savings of 56% compared to the annual cost of paper in schools. This means that 7 trees per student will be kept.
