OBJECTIVES

WeAreSmart 2023, in line with the 2021-2027 Internationalization Strategy of the **Province of Campobasso**, aims to offer to young people from the Molise region the possibility of undertaking a VET mobility experience abroad. In particular, it assigns **1-month VET mobilities to students in initial vocational training** (of which also with Special Educational Needs or fewer opportunities) from the professional and technical institutes of the **Molise region** offering study courses in **Mechanics, Mechatronics, Electronics, Construction and Building, Agricultural Technologies** and related and/or complementary courses.

These VET mobility abroad consist of:

- 1) the possibility of gaining a professional experience thanks to an **internship** in companies in **Malta** and **Spain** that use innovative technologies;
- 2) in a foreign language course on the online platform EU Academy;
- 3) in the possibility of living abroad independently from the family and in contact with a new culture in an organized and protected context. In fact, all participants benefit from both a pre-departure preparation course and constant tutoring, guaranteed on site by the host partner's tutor, the host company tutor and, remotely, by the Province of Campobasso. In the case of underage and SEN students, the Province of Campobasso provides an accompanying person to monitor and facilitate their integration in the new context and the coexistence with the other participants inside and outside the hosting company.

Providing youngsters with the chance to experiment new learning environments, exchange and acquire knowledge and learn about new cultures and practices, **WeAreSmart2023** contributes to the creation a more inter-culturally aware and specialized workforce for the benefit of the economic and social growth and well-being at the local, national and European level.

EXPECTED IMPACT

In the medium to long term, **WeAreSmart 2023** expects to have an **impact**:

- on the skills and attitudes of the participants, making them more employable and capable of undertaking in the industry and new technologies sector;
- on the educational and training systems of the territory (schools, VET centers, training bodies, etc.) which will indirectly benefit from the results and which in the future will want to promote international mobility paths;
- on local and regional companies and trade associations, which may have qualified human resources to improve the use of new technologies and other innovative technologies in the various production contexts;
- on education policies in favor of school-work/PCTO alternation paths with a European and international dimension;
- on the dissemination of the ECVET system and related devices and tools.
